Computer Engineering MSc and Software Engineer who re-engineers delivery infrastructure, improves engineering velocity, and integrates AI into engineering workflows. In my most recent role I led a Lean-driven re-engineering of the delivery pipeline, from diagnosing accumulated technical debt through to measurable gains in delivery speed and reliability, formalized in a master's thesis on Lean CI/CD and AI-ready infrastructure. Alongside this I founded and ran a cooperative through its full operational lifecycle, and bring a systems-level perspective spanning applied AI, immersive technologies, and cybersecurity. Get to know me better [here!](#)

EDUCATION

[Primary Degree] | [Institution] | Sep 20XX - Jul 20XX

Thesis: [Thesis title] ([grade])

[Second Degree] | [Institution] | Sep 20XX - Jul 20XX

Final Project: [Final-project title] ([grade])

[Optional Earlier Degree or Transfer] | [Institution] | Sep 20XX - Jul 20XX

WORK EXPERIENCE

[Most Recent Job Title], [Company] | Mon 20XX - Mon 20XX

[One-line company or product context - what the company does, for whom, and at what scale.]

- Built AI agent skills deployed in internal engineering repositories, enabling automated assistance for complex engineering and process workflows.
- Led a Lean-driven re-engineering of delivery infrastructure and processes, resolving accumulated technical debt and cutting total pipeline job time by more than 50%.
- Redesigned delivery and engineering workflows, contributing to up to 20% more features deployed per sprint.
- Restructured task distribution and handovers, reducing time consumption by around 30% and eliminating duplicated work.
- Contributed to the architecture and testing of an embedded AI chatbot that helps users navigate the platform.
- Contributed to the architecture and testing of a RAG system letting users query their own uploaded documents.
- Drove integration of AI agents and services into product and engineering workflows.
- Collaborated on an in-house image-recognition application built on object detection: labeled and curated the training dataset, helped define detection classes, and ran and evaluated training and optimization tests.
- Designed and implemented a test framework in Playwright, including reusable helpers and utilities for scalable coverage.
- Integrated the automated test battery into GitLab CI pipeline jobs, enabling fully automated execution as part of the workflow.
- Led the Cypress to Playwright migration, including trade-off evaluation, implementation, and documentation.
- Standardized test naming and data conventions and introduced seed-driven data setup to reduce coupling and instability.
- Scripted reproducible local and virtual test environments (seed, rebuild, reinitialize services) in Shell/Bash to improve developer experience.
- Maintained and extended an existing automated test battery; analyzed reports and failure patterns to prioritize fixes.

[Previous Job Title], [Company] | Mon 20XX - Mon 20XX

[One-line company or initiative context.]

- Founded a non-profit cooperative: legal incorporation, administrative setup, governance structure, and ongoing compliance.
- Owned the full entrepreneurial process from idea to operational execution with no prior institutional support.
- Coordinated partnerships with public and private institutions to fund and support community programmes.
- Led educational activities, community workshops, and public-space renovation initiatives.
- Organized and monitored internal procedures for consistent operational execution.
- Managed the full physical setup and operational launch of a café/restaurant space and a nursing-school space.

[Earlier Job Title], [Company] | Mon 20XX - Mon 20XX

- Organized inventory, materials, and warehouse and storage flows.
- Optimized storage and transport procedures, improving handling and distribution time by up to 20%.
- Supported the full logistics cycle (picking, dispatch, transport, retrieval); drove forklift for load handling.
- Performed technical assembly support, including ventilation conduit assembly.

[Earliest Job Title], [Company], [Country] | Mon 20XX - Mon 20XX

- Built Excel databases from publicly available company information for business outreach.
- Conducted company and individual outreach for partnership opportunities.
- Produced documentation linking travel agencies and hospitality brands.

CORE COMPETENCIES

- **Process & Delivery Re-Engineering:** Process analysis and mapping, workflow re-engineering, waste identification, and technical-debt diagnosis and remediation under Lean Software Development. Cut total pipeline job time by more than 50% and supported up to 20% more features deployed per sprint.
- **AI Integration & LLM Engineering:** LLM integration and AI agents (Claude Code), RAG design and evaluation (recall@k benchmarking, golden sets), LangChain, ChromaDB, and local models via Ollama. Shipped AI agent skills, an embedded chatbot, and a RAG system into a production platform.
- **CI/CD & Engineering Effectiveness:** Pipeline optimization and feedback-loop reduction, CI job integration for test batteries, test parallelization, environment reproducibility, and containerized deployment (GitLab CI, Docker Compose). Shortens the distance between a commit and trustworthy feedback.
- **Test Architecture & Reliability:** End-to-end framework design in Playwright, reusable helpers and utilities, seed-driven test data, flaky-test mitigation, and failure-pattern analysis. Builds quality in early instead of inspecting it in late.
- **Software Engineering:** Python, TypeScript/JavaScript, SQL, and Shell/Bash across full-stack and automation work, from a multi-tenant SaaS platform to a framework-free RAG pipeline. Delivers end to end: architecture, data model, API, UI, testing, and deploy.
- **Ownership & Communication:** Initiative and autonomy, root-cause-first problem solving, and communication with technical and non-technical stakeholders. Founded and ran a cooperative through its full operational lifecycle with no prior institutional support.

SKILLS

Process, Operations & Continuous Improvement: Process analysis and mapping · Workflow re-engineering · Operational efficiency · Waste identification and prioritization · Procedure standardization · Task ownership and handover design · KPI design and tracking · Lean Software Development · Technical debt diagnosis and remediation · Continuous improvement (PDCA / Kaizen) · Process automation (RPA, UiPath) · Structured business-case analysis

QA, Testing & Reliability: Software QA (manual and automated) · End-to-end test framework design (Playwright) · Reusable test helpers and utilities · Cypress maintenance and extension · API integration testing · Component-level unit testing · Test pyramid design and coverage rebalancing · Flaky test mitigation · Seed-driven test data · Failure-pattern and log analysis · Shift-left quality · Eval and benchmark harness design (golden sets, controlled A/B)

CI/CD, DevOps & Delivery: CI/CD foundations and practical application · Pipeline optimization and feedback-loop reduction · Build and test resource efficiency · CI job integration for test batteries · Test parallelization · Workflow governance · Local environment automation scripting · Environment reproducibility · Containerization and deployment (Docker, Docker Compose) · Tooling and migration assessment

Applied AI & Machine Learning: CNNs and image classification · YOLO object detection · RNNs and sequence prediction · Transfer Learning · Hyperparameter optimization (Optuna) · LLM integration and AI agents · RAG system design, testing and evaluation (recall@k benchmarking) · Vector databases (Chroma) · LangChain · Chatbot and embedded AI chat · Local LLM deployment (Ollama, Gemma, Qwen) · Prompt engineering · Deep-learning training practice (dropout, batch normalization, augmentation, early stopping, class imbalance) · LLM guardrails and grounding enforcement · Agent harness engineering · Tool and function-calling design · Claude Code extensibility (hooks, slash commands, skills, subagents) · Multi-agent orchestration · AI system design · LLM observability and production monitoring

Cybersecurity & Defensive Engineering: Offensive security · OSINT and footprinting · Vulnerability assessment and reporting · SIEM implementation and log centralization · Threat detection and alerting · Host-based intrusion detection (HIDS) · File integrity monitoring · Wazuh and Elastic Stack (ELK) · Data privacy and PII redaction pipeline design · Penetration testing methodology · Wireless network assessment and MITM · Social engineering and authorized phishing simulation · Web application attack techniques · Detection rule authoring and alert tuning (Wazuh) · Data-layer authorization (PostgreSQL Row-Level Security)

Immersive Tech, 3D & Visualization: Virtual and Augmented Reality · Digital Twins · 3D modelling and printing · VTK 2D/3D/VR visualization · Unity (C#) · Godot · Blender · VRChat SDK · Additive manufacturing and rapid prototyping

Data, Analysis & Reporting: Excel database creation and maintenance · Data structuring and reporting · SQL data handling · SPSS statistics · KPI and operational metric tracking · Analytical reasoning

Engineering Foundations: Physics and Mathematics (classical and quantum mechanics) · Scientific computing and simulation (MATLAB) · Engineering drawings · Systems and computer hardware architecture · Elementary electrical circuits

Programming Languages: Python · TypeScript · JavaScript · Java · C# (Unity) · React Native · SQL Server / SQL · MATLAB · Shell / Bash · Assembly · C · Full-stack web architecture

Tools & Platforms: Playwright · Cypress · GitLab CI · Bash / Shell · Git · MS Project · Excel · SQL · SPSS · Unity · Godot · Blender · VRChat SDK · VTK · Ollama (Gemma, Qwen) · LangChain · ChromaDB · OpenClaw · Docker / Docker Compose · Cloudflare Tunnel · UiPath · Wazuh · Elastic Stack (ELK) · Microsoft 365 · Claude Code · Supabase · PostgreSQL · Drizzle ORM · Zod · pnpm workspaces · Vite · Vercel · Cloudflare R2 · Nmap · Wireshark · Metasploit · Aircrack-ng · Burp Suite · Postfix · Slack webhooks

Soft Skills: Initiative and autonomy · Problem-solving (root-cause-first) · Fast learning and resilience · Leadership and team dynamics · Communication with technical and non-technical stakeholders · Adaptability

SELECTED PROJECTS

Lean-Driven QA & CI/CD Re-Engineering Towards AI-Ready Infrastructures (Master's Thesis)

Tech stack: CI/CD architecture · QA architecture · Test-suite optimization · Research

Research into engineering infrastructures that stay scalable, understandable, and ready for AI integration: CI/CD architecture, QA integration, shift-left quality, flakiness dynamics, and toolchain-migration criteria.

Big Data Analysis & Representation: NO2 Air Pollution in VR (Bachelor's Final Project)

Tech stack: OpenXR · VTK · Unity · 3D

A VR system for visualizing large-scale NO2 air-pollution data across an urban area, with a user study comparing VR and desktop interaction.

Niche-Field SaaS Marketing & Admin Platform

Tech stack: TypeScript · React · Express · PostgreSQL · Drizzle · Zod · Playwright · Vercel

A multi-tenant SaaS platform helping businesses in a niche field market themselves and manage the information central to their operations. Built solo end to end: architecture, data model, API, UI, auth, testing, and deploy.

Shared Expense Tracker (Serverless PWA)

Tech stack: TypeScript · React · Supabase · PostgreSQL (RLS) · Google OAuth · Workbox

A private, installable expense-tracking PWA for two people, deliberately built with no backend to maintain, with authorization enforced in the database rather than in the client. Delivered solo end to end.

Production RAG Chatbot

Tech stack: Python · LangChain · ChromaDB · Ollama · Docker Compose · Cloudflare Tunnel

A publicly deployed chatbot answering visitor questions over a structured personal knowledge corpus. Every retrieval change is gated by a golden evaluation set; controlled A/B testing exposed a silent embedding-tokenizer defect degrading every measurement, and fixing it raised recall@5 from 56% to 70%. Ships behind an audience-filtering and PII-redaction safety gate.

Support Ticket Auto-Reply: Guardrailed Agentic Pipeline

Tech stack: Python · FastAPI · Pydantic · SQLite · pytest · Docker Compose · Ollama

A service that answers support tickets automatically, or hands them to a human when it cannot answer safely. A bounded agentic tool-calling loop drafts replies grounded only in tool results, a post-hoc check verifies every number and identifier against those results, and every failure closes to a handoff with a full decision trace. Built test-first: 500+ automated tests and 15 ADRs.

From-Scratch Local RAG Pipeline

Tech stack: Python · Ollama · nomic-embed-text · numpy

A framework-free local RAG pipeline built to turn RAG theory into hands-on implementation. Built a recall@k evaluation harness, then caught the evaluation itself being too permissive: tightening the ground truth dropped apparent recall@1 from 71% to 14%, turning retrieval depth from an assumption into a measured choice.

Structured Personal Knowledge Corpus

Tech stack: Python · YAML · Markdown

A single-source-of-truth corpus holding identity, skills, projects, and experience as tagged Markdown blocks, ending the drift of maintaining the same facts across a CV, a portfolio site, and an assistant's context. Schema-level audience gating keeps each export to what is appropriate.

Agent-Driven Application Pipeline

Tech stack: Python · LaTeX · TypeScript · Bun · Claude Code · Git

An agent pipeline that turns a job posting into a fit evaluation, a tailored CV, and a cover letter, with a reviewer agent critiquing each draft. Its CV system tailors by verbatim selection from a verified master bank, making invented claims structurally impossible, and its profile syncs from the structured corpus above.

SIEM Implementation: Security Monitoring & Detection

Tech stack: Wazuh · Elasticsearch · Kibana · HIDS · FIM

Designed and deployed a working SIEM centralizing log collection, with detection rules, alerting, file integrity monitoring, and host-based intrusion detection, validated against simulated attacks.

Cybersecurity Assessment & Footprinting (Client Project)

Tech stack: OSINT · Offensive security · Vulnerability assessment

External attack-surface mapping for a small cooperative; delivered a prioritized vulnerability and remediation report and presented it to the client.

Digital Twin & Animal Tracking App

Tech stack: Kotlin · React Native · Firebase · A-Frame

A mobile system keeping a live digital twin of tracked animals across large-scale environments, with two-way communication and an AR layer mapping positions in real space.

1:1 Architectural VR Walkthrough (Client Project)

Tech stack: Unity · 3D modelling · Desktop + headset

Accurate 1:1-scale 3D building models navigable on desktop and in VR, used by clients to plan interior decoration in a spatially accurate representation of their space.

Mobile Client-Management App

Tech stack: React Native · Firebase

A mobile app letting a cooperative access and manage client information on the go, delivered end to end.

Sign Language Recognition: Image-to-Text (Academic)

Tech stack: Python · Computer vision · ML

A computer-vision system reading sign-language gestures from images and converting them to text at 98% classification accuracy.

CNN Match Classification (Academic)

Tech stack: Python · CNNs · Transfer Learning · EfficientNetB0 · Optuna

A multiclass-multilabel CNN over 4,100 spatial heatmap images predicting match outcome, player role, and duration; compared single-input, per-output, Transfer Learning, and Optuna-optimized architectures. Separate per-task models exposed interference in the shared base, and two-phase EfficientNetB0 fine-tuning gave the best win/loss accuracy.

Further Academic ML & Computing

Tech stack: Python · YOLO · RNNs · MATLAB · SPSS

YOLO multi-class object detection at scale; RNN sequence prediction; MATLAB physics and mathematics simulations; SPSS statistical analysis across research cases.

Game Design & Development and Maker Practice

Tech stack: Unity · Godot · Blender · VRChat SDK · FDM printing

Independent multi-engine game development with published content, plus an ongoing home 3D modelling and printing practice for rapid prototyping.

Also built: a SIEM implementation (Wazuh + ELK), a client cybersecurity assessment, a digital twin with an AR layer, 1:1 architectural VR walkthroughs, academic ML (sign-language recognition, CNN/YOLO), and independent game development. More at your-portfolio.example.com.

OTHER RELEVANT INFORMATION

- Recommendation letter from [Reference Name, Title at Organization], available on request; additional references on request.
- International exposure: travel across 20+ countries, training courses in multiple countries, and six months living abroad (Erasmus+).
- Founded a student-run radio station using governmental funds for school improvement; sourced and set up the equipment.
- 18+ years of Scouting across national and international activities, including World Scout Jamboree participation.
- Recurring food-bank volunteer and further volunteer work across forest conservation and animal welfare; community ambassador roles.
- Personal maker practice: home-based 3D modelling and printing for rapid prototyping and iterative problem-solving.
- Writing: two personal blogs on personal growth/psychology and creative writing.

- Personal interest in financial markets and portfolio management: equities and options trading, margin accounts, and risk/position sizing via a live brokerage account (surface only for finance-adjacent roles).
